IN THE SPECIFICATION

Amend paragraph [0017] of the substitute specification as follows:

[0017] Embodiments of the invention are described, by way of example only, with reference to the accompanying drawings.

Figure 1 is a pictorial schematic of the system for generating foam; and

Figure 2 is a pictorial schematic of the dosing device; and

Figure 3 is a schematic diagram of an alternative embodiment of the system of Figure 1.

Amend paragraph [0020] of the substitute specification as follows:

The fluid supply 40 is branched so that there is a first outlet 41 and a second outlet 42. The first outlet 41 and the second outlet 42 is activated by a triggering mechanism 50, such that, the fluid supply 40 is in fluid communication with the first and second outlet. This triggering mechanism 50 is shown as a mechanical triggering mechanism, and for ease of manufacture, a push valve 51. As shown in Figure 3, it [It] is to be understood that the triggering mechanism 50 can be of an electronically activated triggering mechanism, and can trigger the device when the presence of a user is detected, for example, by a motion detector 52. Thus, when a user is within a detectable area, the electronically activated triggering mechanism 50 will activate the system.
